COMPANY OVERVIEW

Founder-led software engineering for operational systems.

Build With Abdallah is a Maine-based software development and IT consulting business that builds, integrates, modernizes and supports maintainable applications. Capabilities span modern web software, legacy systems, enterprise data, manufacturing applications, quality systems and device-connected workflows.

CORE CAPABILITIES

Custom software development
Legacy application modernization
Manufacturing & shop-floor systems
Database & API integration
Quality & device integration
Production application support
Data transformation & automation
Technical documentation & handoff

SELECTED PROJECT EXPERIENCE

Legacy Manufacturing Modernization

Analysis and incremental modernization of aging desktop workflows using VB / VB.NET, Laravel and SQL Server while preserving validated business logic.

Enterprise / SOAP Integration

Integration workflows spanning REST and SOAP services, XML / JSON, SQL Server, transformation, automation and production troubleshooting.

Quality & Device Integration

Experience integrating InfinityQS ProFicient, measurement-data workflows, RS-232 equipment, acquisition services, SQL Server and automation.

Project experience is summarized and anonymized to protect confidential organizational, system and implementation information. InfinityQS experience does not imply affiliation, certification or authorized-partner status.

DIFFERENTIATORS

—Direct access to the engineer responsible for architecture and implementation.

—Experience from physical equipment and local services through databases, enterprise integration and web applications.
